ABSTRACT

The data published here represent the final results of the January 1978 Survey of Scientific and Engineering Personnel Employed at Universities and Colleges. These tables present national estimates based on responses from 1,742 institutions of higher education and their 21 affiliated federally funded research and development centers (FFRDC's), out of the 2,228 that were believed to offer degree-credit courses in the sciences and engineering. Data for the 21 university-administered FFRDC's are collected and tabulated separately. Each parent institution is requested to include in its response all scientists and engineers employed in its regional campuses, medical school, or agricultural experiment station, as well as in research institutes and computer centers that may or may not have particular departmental affiliation. (Author/BB)

GENERAL NOTES

- Earlier issues of this report were entitled *Detailed Statistical Tables. Manpower Resources for Scientific Activities at Universities and Colleges.*

- The data published here represent the final results of the January 1978 Survey of Scientific and Engineering Personnel Employed at Universities and Colleges. These tables present national estimates based on responses from 1,742 institutions of higher education and their 21 affiliated federally funded research and development centers (FFRDC's), out of the 2,228 that were believed to offer degree-credit courses in the sciences and engineering. The survey did not include schools of art, music, law, theology, and other specialized institutions that have no programs in the sciences and/or engineering.

- The 1978 data collection effort represents the sixth full-scale academic science and engineering (S/E) personnel survey conducted on an annual basis. Between 1965 and 1971 the survey was conducted biennially in conjunction with the survey of academic R&D expenditures.

- Data for the 21 university-administered FFRDC's are collected and tabulated separately. Each parent institution is requested to include in its response all scientists and engineers employed in its regional campuses, medical school, or agricultural experiment station, as well as in research institutes and computer centers that may or may not have particular departmental affiliation.

- Details shown in statistical tables may not add to totals because of rounding.

- See the technical notes, appendix A for a detailed explanation of the survey universe, methodology, and limiations of the data; appendix B, for further information on inclusions and definitions; and appendix C, for a facsimile of the questionnaire and instructions.

- Requests for additional information concerning the survey findings should be addressed to Mr. James Hoehn or Mrs. Esther Gist, Universities and Nonprofit Institutions Studies Group, Division of Science Resources Studies, National Science Foundation, Washington, D.C. 20550. (202) 634-4673. Data tapes for January 1978 and prior surveys may be purchased from:

Moshman Associates, Inc.

APPENDIX A
Technical Notes

Scope of Survey

Survey questionnaires were mailed in mid-February 1978 to more than 2,200 institutions of higher education and 21 university-administered federally funded research and development centers (FFRDC's). The survey universe included all institutions of higher education, including 2-year institutions, that were identified by NSF as offering degree-credit courses in the sciences or engineering. The survey excluded such institutions as schools of art, music, law, theology, and others without programs in the sciences and engineering.

The survey population is reviewed during each survey cycle for appropriate institutional coverage. For example, at the beginning of each survey, NSF conducts a review of institutions newly added to the *Education Directory, Colleges and Universities*[1] for those that offer courses in the sciences and engineering. As a result, 29 institutions were added to the 1978 survey. Also, during the course of the survey, six institutions were deleted because of ineligibility for inclusion, school closings, or mergers. At survey closeout in late August 1978, 2,228 universities and colleges and 21 university-associated FFRDC's remained in the study. Of these institutions, 1,763, or 79 percent, responded. This compared with an 87-percent response rate in the 1977 survey. Based on explanations resulting from telephone inquiries to university and college officials while data editing was in process, the declining response rate in 1978 was often attributed to a general inability to complete large numbers of survey forms from all sources and to take care of the academic paperwork in general. In addition, the 1978 survey had been expanded by adding questions on the full-time-equivalent (FTE) of employed scientists and engineers and their R&D involvement. Those items were "optional" in the 1977 survey.

The vast majority of nonrespondents were small institutions. Among approximately 300 Ph.D.-granting institutions that account for virtually all academic research, only 31 were nonrespondents. These doctorate-granting institutions also account for about two-thirds of all academic scientists and engineers. Two-year institutions made up more than one-half of all nonrespondents.

Estimates for Nonresponse

Estimates were made for institutions that failed to respond to the survey, in order to provide overall data for academic employment of scientists and engineers. These "imputations" for nonrespondents were based primarily on key item totals reported (or estimated) in the prior survey year. Totals for these institutions were inflated or deflated according to overall rates of change for data supplied by respondents at the same degree level and the same type of governance (public or private). Detailed imputations were then made on the basis of the distribution computed for similar institutions. The same imputation methodology was used in both the 1977 and 1978 survey.

Tables A-1—A-3 which are broken down by individual survey items, show imputation rates in percentage terms for each statistical cell on the survey questionnaire. For example, of the total headcount of full-time scientists and engineers employed at academic institutions in 1978, 12 percent were estimated based on imputation methodology explained above. The imputation rates are considerably higher, of course, for certain items representing finer details of data, such as employment of scientists and engineers in 2-year institutions. That group, having the largest number of nonrespondents, had a 28-percent imputation rate for full-time employment of scientists and engineers.

Among individual items on the 1978 questionnaire, the largest imputation rates were for data collected on the FTE scientists and engineers (table A-2) employed in various functions such as teaching and research. For instance, the imputation rate was 29 percent for the FTE distribution of total counts of full-time scientists and engineers involved in R&D activities as reported in item 1. In terms of detailed disciplines reported in item 6, the imputation rates were generally higher for R&D involvement than was the case for overall estimates reported for the same function in items 1 and 3 (i.e., full-time and part-time). Accordingly, an imputation rate of 35 percent of total FTE's devoted to R&D activities resulted from detailed discipline breakdowns in item 6, compared with 29 percent in item 1 (full-time scientists and engineers) and 22 percent in item 3 (part-time scientists and engineers). These differences reflect largely the inclination of some institutional respondents to report overall estimates for FTE involvement in the R&D function, while being reluctant to report or lacking adequate records on which to base detailed information needed to report at the level of disciplines. It should also be noted that item 6 on FTE involvement in R&D activities was newly added to the form in 1978 and a number of institutions had not designed or developed data systems to supply these estimates.

The total number of FTE scientists and engineers engaged in R&D activities differs on three tables shown in this report; e.g., table B-20 shows that 57,123 FTE academic scientists and engineers were working on R&D activities in 1978, compared with 55,164 as shown in tables B-50 and B-51. The difference of 1,959 FTE scientists and engineers in academic R&D activities between the three tabulations primarily results from the following: (1) Statistics in table B-20 were compiled on

[1]National Center for Education Statistics. *Education Directory, Colleges and Universities, 1976-77* (Washington, D.C. 20402: Supt. of Documents, U.S. Government Printing Office).

the basis of estimates of totals in items 1 and 3 showing a 3-way split of FTE activities—teaching, research and development, and other activities—while data in tables B-50 and B-51 were reported according to detailed breakdowns in item 6 of personnel in 22 academic disciplines. (2) Since many institutions were willing to provide aggregative estimates of R&D involvement in items 1 and 3, but not by detailed discipline as called for in item 6, the response rate for data in table B-20 was higher than for tables B-50 and B-51 (imputations were made for nonrespondents).

Limitations and Modifications of Survey Coverage

Since the universe for the survey consisted of all institutions of higher education identified by NSF as having S/E programs, the data presented are not subject to a sampling error. Statistics shown in this report, however, are subject to considerations of reliability and validity mainly because lack of uniformity and comparability in academic record-keeping practices result in reporting differences. In addition, as pointed out above, reporting of certain data items is uneven because of differing levels of institutional response, as is reflected in imputation rates.

A number of studies have been conducted by NSF staff and under contractual arrangements to evaluate the quality of institutional reporting practices. The most recent of these evaluative efforts covered the 1978 academic personnel survey data, as well as two other NSF surveys on R&D expenditures and graduate science students and postdoctorals.[2] That study consisted of a sample of 45 major research universities where site visits and interviews were conducted with NSF survey respondents and other academic officials such as research administrators.

The major findings from the study of 45 universities show that actual reporting practices differ in a number of aspects from the NSF personnel survey instructions and that respondents encounter a number of reporting problems, particularly as they pertain to the following elements:

1. Reporting by department rather than field

Forty-one of the 45 sampled institutions reported to NSF on the basis of an "employing department" concept or something very similar. These similar concepts included "contracting department," "cost centers," "paying department," etc. Usually, institutional respondents matched their department titles with the disciplinary taxonomy shown on the NSF personnel survey instructions. They then reported all of their professional employees in these departments under a single NSF discipline. In terms of interdisciplinary laboratories, most of the institutions followed the same reporting practices, particularly when these laboratories had departments of assignment.

2. Function in which primarily employed and full-time-equivalents

Nearly all of the university officials interviewed expressed the opinion that neither the primarily employed concept nor FTE's provides a high level of accuracy. The primarily employed concept generally understates research involvement and inflates the teaching function. The major advantage of the primarily employed concept, as was pointed out numerous times during the campus interviews, was ease of reporting. Because of that benefit, the response rate was higher in the 1978 survey for the primarily employed than for the FTE concept. Of the sampled institutions, more than one-third did not report the FTE of their research involvement by field of science.[3] Only one institution did not report either primarily employed data or FTE's.

The advantage that the FTE concept has over the primarily employed one is that it comes closer to being a more valid measure of the research involvement of scientists and engineers. When asked the question: "In your opinion, which set of data gives a more accurate picture of the research effort of your institution—FTE's or primarily employed?," nine-tenths indicated "FTE's."[4] The reason given by nearly all institutions was that the very person who is most often associated with academic research—the full professor who is primarily a teacher—is not covered by that measure. Ninety-five percent of the sampled institutions indicated that to be their major concern.

Even though the FTE concept provided a more sensitive measure of academic research involvement, it has special problems of its own. Many of these problems resulted from the reporting practices of institutions, which were often based on outside sources of research funds (i.e., sponsored research) supporting the faculty members' salaries. As one institutional respondent observed:

> "Only that percent of their salaries funded by restricted funds (i.e., primarily from sponsored research awards) was used to show percent effort in R & D activity. The University-funded part of faculty salaries in fact supports all unsponsored research and departmental administration activity. Often salaries are initially charged to clearing or other University accounts and later recharged to restricted funds. Therefore, [FTE] data may show disproportionately less effort devoted to research activity than is actually the case."

In terms of actual reporting practices, more than one-half of the institutions reporting FTE data based them on the percentage relationships between an individual's salary and income from sponsored research. Thus, as pointed out above, all internally supported research, including departmental research, disappears in the calculation.[5] Most of the remaining institutions based their FTE reports to NSF on informal surveys of deans and department chairpersons and on time-and-effort reporting.

A common reporting practice utilized to calculate primarily employed data was to review position titles of professional staff. Those that have research titles such as "Research Professor" fall within the "primarily employed in research" category while all others are reported as teachers, administrators, etc. Many of the primarily employed reporting practices are based on the FTE concept, which in turn may be calclated from data obtained in income and salary files, time-and-effort reporting, etc. In one case, the primarily employed data were based on "personal knowledge" and in another on "rules of thumb."

3. Full-time and part-time employment

Reporting of full-time and part-time employment was relatively easy and straightforward for most institutions. Thirty-three of the 45 sampled institutions defined full-time employment in terms of 100-percent employment, or 40 hours per week, or 100 percent in terms of salary level. Among the remaining institutions, definitions of full-time employment varied widely. One institution separated full-time from part-time employees by reporting "just Instructors" in the latter category because of the absence of an institutional defini-

[2] *National Center for Higher Education Management Systems, NSF Academic Science Statistics Postenumeration Study - Final Report.* Joint report by the National Science Foundation and the National Center for Higher Education Management Systems, Oct. 6, 1978, out of print.

[3] This response analysis is based on the 1977 personnel survey form which carried the FTE item as "optional." In the 1978 survey, the response rate was much better. All but five of the 45 sampled institutions responded to the FTE item in 1978 and a large university central system indicated that it would provide FTE data in future NSF surveys. An indication of overall response to the FTE item in 1978 is that of the institutional respondents among the 100 leading universities (i.e., in terms of academic R&D expenditures) 83 percent provided data on FTE involvement in research.

[4] One institution replied that "neither one presents a valid measure;" another indicated that the primarily employed concept only gives a relatively accurate picture of research involvement at its medical center; only two institutions voted just for the primarily employed measure.

[5] The NSF definitions of *research* used in the personnel survey include departmental research that is part of general instruction funds, contrary to most reporting practices. See appendix C. p.

tion. Another institutional respondent stated that there was "no clear definition of part-timers because few would identify their FTE employment due to mini-maxi salary considerations." As a result, that institution must report to NSF from estimates based on salary level. One institution's definition of full-time employment was anyone who works more than 2,080 hours for it per annum. Another's definition was anyone who works more than 37-1/2 hours per week, or who taught six credit hours or more. One intitution based its report to NSF on information collected on data cards in a survey of deans and department chairpersons. Another has no part-time employees. One used various criteria to define part-time employment such as exclusion of all continuous employees, eligibility for fringe benefits, and exclusion of any temporary employee if they have the equivalent of a nine-month contract. Three institutions had standards based on FTE employment below 100 percent. One of them defined a full-time employee as anyone who works 95 percent or more for the university; another, one who works at a 40-percent level; and the third, at 50 percent or 20 hours per week.

Thirty-three of the institutions indicated that the basic data to report full-time and part-time employment were on central files. Only one institution had special problems involved in classifying part-timers into their primary functions (i.e., teaching, research) and indicated that these data were "especially error prone and were the same as headcounts." All but one institution assigned part-time employees to academic departments or their equivalent.

4. Highest earned degree

Reporting of data on the highest earned degree of professional employees was done with relative ease by most institutions in the study sample. Four of the 45 institutions were nonrespondents to this item, including a large university system. Three of them were nonrespondents because highest earned degree data were not kept on central files and the fourth because they were not updated and consequently their quality was suspect.

Two-thirds of the sampled institutions maintained highest earned degree data on central files, most commonly personnel, payroll, or budget files. Approximately one-fourth of the institutions based their report to NSF on department records or estimates. Two institutions combined computer listings from central records with departmental and faculty reviews. One institution reported in terms of "personal estimates based on listings of individuals and degrees earned." One institution stated that degree data are "rough estimates based on probable percentages derived several years ago by the Compensation Manager." That institution was"....very much concerned about individual privacy issues and kept no central files on degree levels." One institution reported to NSF for one of its parts from central files (even though data on Ed.D.'s were not available) while the reports for two other parts were based on "unknown sources."

The most frequently encountered procedure to update the highest earned degree information, used by 27 of the sampled institutions, was "individual initiative." Most of these institutions, while leaving the updating of the file up to individuals, had some sort of review procedure by academic deans or departmental staff for certification. Also, most of the persons interviewed in institutions using that procedure felt that the degree files were current because promotions become somewhat dependent on attaining higher degree levels. Eleven of the institutions had systematic updates of central degree files at least once a year, or updated these files as part of collecting personnel data for NSF. The remaining institutions in the sample gave varying answers including: "the data were not very current;" "their accuracy varied from department to department;" "they were updated regularly only for this university's own graduates;" and "although the highest degree data were on a computer file, they were not current and the University Bulletin was reviewed individual by individual to make them current."

In only two institutions was the system for maintaining and updating degree attainment of part-timers different than that used for full-timers. In one institution, their central personnel files were only maintained for degree levels achieved by full-time employees. In the second case, the data were not considered to be current and they estimated the NSF submission by classifying all part-timers as "Bachelor's recipients."

5. Sex of full-time professional employees

These data on men-women employment of full-time scientists and engineers were the most accurate statistics obtained by NSF in its 1978 personnel survey. They were reported with relative ease from central records by most institutions and were readily known by departmental respondents in others. Thus, all of the institutional respondents were able to furnish NSF statistics for that item and there were no complaints about quality raised in the campus interviews.

6. Postdoctoral

The instructions to the 1978 NSF personnel survey specified that postdoctorals working in the sciences and engineering should have been included as professional employees. All but three of the sampled institutions attempted to include postdoctorals in the counts of professionals. Most of them stated that postdoctorals were considered to be "exempt" employees (i.e., exempt from the Fair Labor Standards Act) and were included on central payroll files. In several institutions, postdoctorals qualified for certain benefits, including medical services and parking, and their identity was thus known.

In many institutions, perhaps the majority, the concept of a postdoctoral was a nebulous one. As one institutional official stated in the interview: "Postdoctoral students were included if they were employed as professionals, i.e., if they had a professional occupation code. Postdoctorals on stipends were not reported because they were not on the payroll system. In general, postdoctorals could not be identified through a central MIS."

This inability to identify postdoctorals in central data files was echoed by 18 of the sampled institutions. In addition, a substantial number expressed doubt about the comprehensive coverage of them in payroll files since many were utilized on research projects, paid by outside funding sources, and thus missed in central accounts. This would also have been true of postdoctoral fellows who were mailed checks directly from private foundations or agencies.

Table A-1.—Imputation rates for scientists and engineers at all universities and colleges by field and function in which primarily employed, employment status, educational attainment, and sex: January 1978

(6) Other Engineers	9.9	8.9	16.3	25.1	34.2
Physical Scientists (Total)	13.0	12.3	17.3	27.8	33.6
(1) Chemists	14.0	13.4	17.9	30.9	35.6
(2) Physicists	11.5	11.1	15.7	24.9	33.1
(3) Other Physical Scientists	12.8	11.4	18.8	27.9	28.3
Environmental Scientists (Total)	9.3	8.9	12.8	24.0	32.7
(1) Earth Scientists	10.0	9.6	13.0	23.1	29.7
(2) Atmospheric Scientists	5.1	5.1	5.0	21.5	33.7
(3) Oceanographers	9.0	8.1	18.4	29.6	38.6
Mathematical Scientists (Total)	14.7	13.5	19.2	29.7	28.6
(1) Mathematicians	14.6	13.3	19.5	29.9	29.4
(2) Computer Scientists	15.2	14.0	18.2	29.0	27.1
Life Scientists (Total)	13.2	11.7	20.5	27.0	36.3
(1) Agricultural Scientists	6.2	6.4	11.4	15.0	29.3
(2) Biological Scientists	13.8	13.1	19.8	29.2	34.5
(3) Medical Scientists	14.5	12.3	21.4	28.1	38.9
Psychologists (Total)	14.4	13.2	18.1	30.2	29.9
Social Scientists (Total)	13.4	12.7	16.3	28.9	32.8
(1) Economists	12.1	11.2	15.6	25.7	29.3
(2) Sociologists	15.0	14.0	18.9	30.2	31.0
(3) Political Scientists	13.2	12.9	14.4	30.2	33.4
(4) Other Social Scientists	13.0	12.5	15.9	29.0	38.1
Total Headcount	13.1	11.9	18.3	28.0	34.7

Table A-3.—Imputation rates for technicians at all universities and colleges by field and function in which primarily employed: January 1978

Item 7. Field of Employment	Total	R&D	Other Activities
Engineering Technicians	15.6	24.0	18.4
Physical Science Technicians	11.9	13.9	15.0
Environmental Science Technicians	9.8	9.9	15.0
Mathematical & Computer Science Technicians	15.0	17.2	18.6
Life Science Technicians	17.4	18.1	25.2
Psychology Technicians	1.4	2.8	5.3
Social Science Technicians	2.2	6.3	5.0
Total	15.7	17.5	19.8

APPENDIX B
Statistical Tables

NOTE: Tables B-1, B-2, B-13, B-21, B-23, B-25, B-38, B-40, B-42, and B-44, combine full-time and part-time scientists and engineers.

SCIENTISTS AND ENGINEERS EMPLOYED IN INSTITUTIONS OF HIGHER EDUCATION

Page

Trends

B-1. By field: 1965-78 9

B-2. By primary function: 1965-78 9

B-3. By field and status: 1965-78 10

B-4. By type of institution and status: 1965-78 10

B-5. Full time, by field and institutional control: 1969-78 11

B-6. Full time, by institutional control and level of attainment: 1969-78 11

B-7. Full time, by field and sex: 1975-78 12

By Type of Institution

B-8. In institutions awarding doctorate degrees in the sciences or engineering, by field, institutional control, and status: January 1978 12

B-9. In institutions awarding master's degrees in the sciences or engineering, by field, institutional control, and status: January 1978 13

B-10. In institutions awarding bachelor's degrees in the sciences or engineering, by field, institutional control, and status: January 1978 13

B-11. In institutions awarding degrees in fields other than in the sciences or engineering, by field, institutional control, and status: January 1978 14

B-12. In 2-year institutions, by field, institutional control, and status: January 1978 14

By Field, Employment Status, Institutional Control, Educational Attainment, Primary Function, and Sex

B-13. By field and primary function: January 1977 and January 1978 15

B-14. Full time, by field and primary function: January 1977 and January 1978 15

B-15. By field, institutional control, and status: January 1978 16

B-16. By type of institution, status, institutional control, and primary function: January 1978 16

B-17. By type of institution, status, and primary function: January 1977 and January 1978 17

B-18. By type of institution, status, and field: January 1978 17

B-19. By type of institution, status, and level of attainment: January 1977 and January 1978 18

B-20. Full-time-equivalents, by type of institution, status, and primary function: January 1978 18

B-21. By field, institutional control, and primary function: January 1978 19

B-22. Full time, by field, institutional control, and primary function: January 1978 19

B-23. By field and type of institution: January 1977 and January 1978 20

B-24. Full time, by field and type of institution: January 1977 and January 1978 20

B-25. By primary function, type of institution and level of attainment: January 1977 and January 1978 21

B-26. Full time, by primary function, type of institution, and level of attainment: January 1977 and January 1978 21

B-27. Full time, by field and sex: January 1978 22

B-28. Full time, by type and control of institution, and sex: January 1978 22

At 50 Leading Universities

B-29. Full time, at 50 leading universities and colleges: January 1977 and January 1978 23

B-30. Full time, at 50 leading public universities, by field and sex: January 1978 24

B-31. Full time, at 50 leading private universities, by field and sex: January 1978 25

B-32. Full time, at 50 leading institutions awarding doctorate degrees in the sciences or engineering, by field and sex: January 1978 26

B-33. Full time, at 50 leading institutions awarding master's degrees in the sciences or engineering, by field and sex: January 1978 27

B-34. Full time, at 50 leading institutions awarding bachelor's degrees in the sciences or engineering, by field and sex: January 1978 28

B-35. Full time, at 50 leading 2-year institutions, by field and sex: January 1978 29

By Geographic Distribution

B-36. By division, State, institutional control, and status: January 1978 30

B-37. By division, State, status, and primary function: January 1978 31

B-38. By division, State, and field: January 1978 32

B-39. Full time, by division, State, and field: January 1978 33

B-40. By division, State, institutional control, and primary function: January 1978 34

B-41. Full time, by division, State, institutional control, and primary function: January 1978 35

B-42. By division, State, and type of institution: January 1978 36

B-43. Full time, by division, State, and type of institution: January 1978 37

B-44. By division, State, and level of attainment: January 1978 38

B-45. Full time, by division, State, and level of attainment: January 1978 39

B-46. Full time, by division, State, and sex: January 1978 40

In Research and Development

B-47. By field, institutional control, and status: January 1978 41

B-48. In institutions awarding doctorate degrees in the sciences or engineering, by field, institutional control, and status: January 1978 41

B-49. By division, State, institutional control, and status: January 1978 42

Full-Time-Equivalents

B-50. By field, institutional control, and primary function: January 1978 43

B-51. By field, type of institution, and primary function: January 1978 44

TECHNICIANS EMPLOYED IN THE SCIENCES AND ENGINEERING

B-52. By field and primary function: January 1977 and January 1978 45

B-53. By field and type of institution: January 1978 45

SUMMARY DATA FROM SURVEY QUESTIONNAIRES

Universities and Colleges

B-54. Summary data for 2,166 universities and colleges: January 1978 46

B-55. Summary data for 1,167 public universities and colleges: January 1978 48

B-56. Summary data for 999 private universities and colleges: January 1978 50

B-57. Summary data for 297 institutions awarding doctorate degrees in the sciences or engineering: January 1978 52

B-58. Summary data for 313 institutions awarding master's degrees in the sciences or engineering: January 1978 54

B-59. Summary data for 727 institutions awarding bachelor's degrees in the sciences or engineering: January 1978 56

B-60. Summary data for 803 2-year institutions of higher education: January 1978 58

Federally Funded Research and Development Centers (FFRDC's) (Administered by Universities and Colleges)

B-61. Summary data for 21 FFRDC's: January 1978 60

TABLE B-1. SCIENTISTS AND ENGINEERS EMPLOYED IN UNIVERSITIES AND COLLEGES BY FIELD: JANUARY 1965-78

Covering Letter 64

Survey Questionnaire 65

Survey Instructions and Definitions 68

NATIONAL SCIENCE FOUNDATION
WASHINGTON, D.C. 20550

Dear Respondent:

Enclosed is the 1978 Survey of Scientific and Engineering Personnel Employed at Universities and Colleges. Your cooperation in providing a timely response to the survey will be greatly appreciated.

The data from this survey, as you may be aware, are utilized in Science Indicators, a recurring report prepared for the President by the National Science Board. The academic manpower statistics play a significant role in the preparation of one of the major sections of the report concerning an analysis of the supply and utilization of science and engineering personnel in the United States. Science Indicators serves as an input in shaping future policies concerning Federal support for science and technology, including academic science. The survey results are also the basis for annual NSF publications, such as Highlights, Detailed Statistical Tables, and analytical reports. We have been able to publish the reports in the same year that the data have been collected largely because of the excellent cooperation from you and the rest of the higher education community.

The enclosed survey form is similar to the one used last year, except for two changes. First, NSF has deleted the item that requested data on scientists and engineers with Ph.D. or Sc.D. degrees by field in which primarily employed (previously known as item 5). Second, the item requesting full-time-equivalent (FTE) data on research and total activities, by field (now item 6) is no longer designated as "optional."

We would appreciate your fullest cooperation in responding to the FTE item in the current survey. The continuation of this effort is worthwhile because FTE data represent a potentially better measure of research involvement than do headcount data classified on a "primarily employed" basis. NSF acknowledges that some institutions had difficulty in reporting FTE data in the 1977 survey. Many institutions, however, indicated that data were not available in 1977 but were

expected to be available by 1978. We feel that another year's experience in collecting FTE data in this survey, along with assessments received from other studies over the next year, are required in order to provide sufficient information upon which to base a final decision on the future of FTE reporting in this survey.

I would like to clarify a question raised several times in the past year about the principal focus of this survey. Some respondents have indicated that the survey appears to be aimed primarily at large research universities. While data on personnel engaged in research activities is an important objective of the survey, it is by no means the only area of major NSF concern. Information on personnel primarily engaged in teaching activities at all levels of institutions constitutes another major objective of the survey.

Included in the survey package is a postcard that should be returned immediately upon receipt. It will assure us that the questionnaire has reached you and will provide the names of persons to be contacted if questions arise in the follow-up and editing phases of the survey. Please complete and return the questionnaire to us by March 31, 1978.

A final report on the January 1976 survey was published and distributed in June 1977 and selected tabulations covering the 1977 survey were published and distributed in November 1977. Copies of these reports were sent to you, if you or another official in your institution indicated interest in them in an earlier postcard user's survey. If you did not receive any of these publications or you would like any additional data, please let us know and we will try to provide them to you.

Thank you in advance for your efforts in preparing an early response to this survey. If you have any questions, please contact me or Mr. Robert Loycano. We may be reached on (202) 634-4673.

Sincerely yours,

Penny D. Foster

NATIONAL SCIENCE FOUNDATION
Washington, D.C. 20550

SURVEY OF SCIENTIFIC AND ENGINEERING PERSONNEL EMPLOYED AT UNIVERSITIES AND COLLEGES, JANUARY 1978

Organizations are requested to complete and return this form to:

NATIONAL SCIENCE FOUNDATION
1800 G Street, N.W.
Washington, D.C. 20550 Attn: UNISG

This information is collected under the authority of the National Science Foundation Act of 1950, as amended. All information you provide will be used for statistical purposes only. Your response is entirely voluntary and your failure to provide some or all of the information will in no way adversely affect your institution.

Name and address of institution:

(Please correct if name or address has changed)

This survey requests employment data as of January 1978. The completed 1978 questionnaire should be returned to NSF by March 31, 1978. Your cooperation in returning the survey questionnaire promptly will be appreciated. If you determine, however, that you cannot respond by March 31, please notify NSF and request an extension of time.

Please read the enclosed instructions before completing this form. If you have any questions about the completion of the form, contact Robert Laycano (202-634-4673). Where exact data are not available, use estimates. Please complete all items; estimates by college officials will be better than NSF estimates. Enter "0" as an item total (lines 2100, 2200, etc., are item totals) rather than leave the total blank.

All entries should be in whole numbers. Please do not enter decimals or fractions, except in column 5 of item 6 where 1 decimal place is optional.

Institutions of Higher Education

Include data for branches (including regional campuses) and all organizational units of your institution, such as a medical school or agricultural experiment station. Also include any hospital or clinic owned, operated, or controlled by the University, and integrated operationally with the clinical programs of your medical school. **Exclude** data for any federally funded research and development centers (FFRDC's) administered by your institution. **(See below).**

Please classify your institution according to (1) highest degree granted in the sciences or engineering and (2) primary administrative control.

Highest degree granted in the sciences or engineering during 1976-77	Check one	One example of a science or engineering field in which highest degree was awarded	Check primary administrative control of your institution	
Ph.D.	☐		Federal	☐
M.D., D.D.S., etc.	☐		State	☐
Master's	☐		Local	☐
Bachelor's or equivalent	☐		Private	☐
Degree other than in science or engineering	☐			
2-year program	☐			

Federally Funded Research and Development Centers (FFRDC's)

Separate forms have been mailed directly to all FFRDC's administered by academic institutions. A list of these centers appears on page 2 of the Instructions and Definitions.

NSF FORM 724 (12-77)

SECTION A. NUMBER OF SCIENTISTS AND ENGINEERS, JANUARY 1978
(INCLUDE postdoctorals; EXCLUDE graduate students)

Item 1. Full-time scientists and engineers, by field and function in which primarily employed (enter the totals of 1a thru 1g in 1h); and total full-time-equivalents (FTE), by function, January 1978 (enter in 1i)

FIELD OF EMPLOYMENT		TOTAL (1)	TEACHING (2)	R&D (3)	Other activities (4)
a. Engineers (total)	2110				
(1) Aeronautical & astronautical engineers	2111				
(2) Chemical engineers	2112				
(3) Civil engineers	2113				
(4) Electrical engineers	2114				
(5) Mechanical engineers	2115				
(6) Other engineers	2116				
b. Physical scientists (total)	2120				
(1) Chemists	2121				
(2) Physicists	2122				
(3) Other physical scientists	2123				
c. Environmental scientists (total)	2130				
(1) Earth scientists	2131				
(2) Atmospheric scientists	2132				
(3) Oceanographers	2133				
d. Mathematical & computer scientists (total)	2140				
(1) Mathematicians (exclude computer scientists)	2141				
(2) Computer scientists (exclude programmers)	2142				
e. Life scientists (total)	2150				
(1) Agricultural scientists	2151				
(2) Biological scientists	2152				
(3) Medical scientists (see instructions, p.1)	2153				
f. Psychologists (total)	2160				
g. Social scientists (total) (exclude historians)	2170				
(1) Economists	2171				
(2) Sociologists	2172				
(3) Political scientists	2173				
(4) Other social scientists	2174				
h. Total headcount (sum of a thru g) A/	2100				
i. FTE distribution, by function B/	2190				

Item 2. Full-time scientists and engineers, by highest earned degree and function in which primarily employed, January 1978

HIGHEST EARNED DEGREE		TOTAL (1)	TEACHING (2)	R&D (3)	Other activities (4)
Doctorate holders, by type:					
a. Ph.D. or Sc.D.	2210				
b. Ed.D.	2220				
c. M.D., D.D.S., D.V.M., etc.	2230				
d. Master's	2240				
e. Bachelor's or the equivalent	2250				
f. Total (sum of a thru e)	2200				

A/ Totals in line 1h should be the same as the corresponding totals in line 2f.

B/ The total reported in item 1i, column 1, should, by definition, be the same as the total in item 1h, column 1. However, the FTE distribution by function (columns 2, 3, and 4) will not necessarily coincide with the functional distribution on a "primarily employed" basis in line 1h.

Item 3. Part-time scientists and engineers, by field and function in which primarily employed (enter the totals of 3a thru 3g in 3h); and total FTE's by function, January 1978 (enter in 3i) (INCLUDE postdoctorals; EXCLUDE graduate students)

FIELD OF EMPLOYMENT		TOTAL (1)	TEACHING (2)	R&D (3)	Other activities (4)
a. Engineers (total)	2310				
(1) Aeronautical & astronautical engineers	2311				
(2) Chemical engineers	2312				
(3) Civil engineers	2313				
(4) Electrical engineers	2314				
(5) Mechanical engineers	2315				
(6) Other engineers	2316				
b. Physical scientists (total)	2320				
(1) Chemists	2321				
(2) Physicists	2322				
(3) Other physical scientists	2323				
c. Environmental scientists (total)	2330				
(1) Earth scientists	2331				
(2) Atmospheric scientists	2332				
(3) Oceanographers	2333				
d. Mathematical & computer scientists (total)	2340				
(1) Mathematicians (exclude computer scientists)	2341				
(2) Computer scientists (exclude programmers)	2342				
e. Life scientists (total)	2350				
(1) Agricultural scientists	2351				
(2) Biological scientists	2352				
(3) Medical scientists (see instructions, p 1.)	2353				
f. Psychologists (total)	2360				
g. Social scientists (total) (exclude historians)	2370				
(1) Economists	2371				
(2) Sociologists	2372				
(3) Political scientists	2373				
(4) Other social scientists	2374				
h. Total headcount (sum of a thru g) 3/	2300				
i. FTE distribution, by function 4/	2390				

Item 4. Part-time scientists and engineers, by highest earned degree and function in which primarily employed, January 1978

HIGHEST EARNED DEGREE		TOTAL (1)	TEACHING (2)	R&D (3)	Other activities (4)
Doctorate holders, by type					
a. Ph.D. or Sc.D.	2410				
b. Ed.D.	2420				
c. M.D., D.D.S., D.V.M., etc.	2430				
d. Master's	2440				
e. Bachelor's or the equivalent	2450				
f. Total (sum of a thru e)	2400				

3/ Totals in line 3h should be the same as the corresponding totals in line 4f.
4/ The totals in item 3i (converting figures on part-time employment into FTE's will necessarily differ from headcount totals in line 3h.

Item 5. Full-time scientists and engineers, by field in which primarily employed, and sex, January 1978 (Totals reported in item 5, column 1, should equal the totals reported in item 1, column 1.)

FIELD OF EMPLOYMENT		TOTAL (1)	MEN (2)	WOMEN (3)
a. Engineers (total)	2610			
(1) Aeronautical & astronautical	2611			
(2) Chemical engineers	2612			
(3) Civil engineers	2613			
(4) Electrical engineers	2614			
(5) Mechanical engineers	2615			
(6) Other engineers	2616			
b. Physical scientists (total)	2620			
(1) Chemists	2621			
(2) Physicists	2622			
(3) Other physical scientists	2623			
c. Environmental scientists (total)	2630			
(1) Earth scientists	2631			
(2) Atmospheric scientists	2632			
(3) Oceanographers	2633			
d. Mathematical & computer scientists (total)	2640			
(1) Mathematicians (exclude computer scientists)	2641			
(2) Computer scientists (exclude programmers)	2642			
e. Life scientists (total)	2650			
(1) Agricultural scientists	2651			
(2) Biological scientists	2652

f. Psychologists (total)	2660			
g. Social scientists (total) (exclude historians)	2670			
(1) Economists	2671			
(2) Sociologists	2672			
(3) Political scientists	2673			
(4) Other social scientists	2674			
h. Total headcount (sum of a thru g)	2600			

77

78

Item 6

Scientists and engineers, by field in which primarily employed, employment status, and total full-time equivalents (FTE's) by field, January 1978

NOTE: This information is needed by NSF and others interested in the current status and trends in the level of academic research, by field.

FIELD OF EMPLOYMENT		Headcounts: Total (1)	Headcounts: Full time [a] (2)	Headcounts: Part time [b] (3)	Estimated full-time-equivalents (FTE): Total FTE's (Include all activities, e.g., teaching, R&D etc., of all individuals reported in col. 1) (4)	Estimated full-time-equivalents (FTE): Percent of total FTE's devoted to R&D (5)
a. Engineers (total)	2710					%
(1) Aeronautical & astronautical engineers	2711					%
(2) Chemical engineers	2712					%
(3) Civil engineers	2713					%
(4) Electrical engineers	2714					%
(5) Mechanical engineers	2715					%
(6) Other engineers	2716					%
b. Physical scientists (total)	2720					%
(1) Chemists	2721					%
(2) Physicists	2722					%
(3) Other physical scientists	2723					%
c. Environmental scientists (total)	2730					%
(1) Earth scientists	2731					%
(2) Atmospheric scientists	2732					%
(3) Oceanographers	2733					%
d. Mathematical & computer scientists (total)	2740					%
(1) Mathematicians (exclude computer scientists)	2741					%
(2) Computer scientists (exclude programmers)	2742					%
e. Life scientists (total)	2750					%
(1) Agricultural scientists	2751					%
(2) Biological scientists	2752					%
(3) Medical scientists (see instructions, p. 1)	2753					%
f. Psychologists (total)	2760					%
g. Social scientists (total) (exclude historians)	2770					%
(1) Economists	2771					%
(2) Sociologists	2772					%
(3) Political scientists	2773					%
(4) Other social scientists	2774					%
h. Total (sum of a thru g)	2700					%

NOTE: If you presented data in column 5 in terms of absolute numbers instead of percentages, please check this box ☐

[a] Totals in column 2 should be the same as corresponding totals in column 1 of item 1.

[b] Totals in column 3 should be the same as corresponding totals in column 1 of item 3.

79

SECTION B. NUMBER OF TECHNICIANS EMPLOYED IN THE SCIENCES AND ENGINEERING, January 1978

Item 7. **Technicians, by field and function in which primarily employed, January 1978**

FIELD OF EMPLOYMENT		TOTAL (1)	R&D (2)	Other activities (3)
a. Engineering technicians	2810			
b. Physical science technicians	2820			
c. Environmental science technicians	2830			
d. Mathematical and computer science technicians	2840			
e. Life science technicians	2850			
f. Psychology technicians	2860			
g. Social science technicians	2870			
h. Total (sum of a thru g)	2800			

CHECK LIST

( ) 1. Are all entries rounded to whole numbers? (Please do not enter fractions or decimals, except in column 5 of item 6 where one decimal place is optional.)

( ) 2. Do the data add to subtotals?

( ) 3. Are all items completed? YOUR ESTIMATES will be better than OURS. An explanation of estimates may be noted on a separate sheet or in the remarks.

( ) 4. Are all branches and components such as a medical school and agricultural experiment station included?

( ) 5. Have you included all postdoctorals?

1977-78 DATA CHECK

Please compare your January 1978 personnel data with your survey response for January 1977, particularly for the following item totals. Please explain below or on a separate sheet any significant changes and where possible, indicate any required adjustments in data reported in previous surveys.

	1977	1978
Total full-time scientists & engineers	Line 2100, col. 1	Line 2100, col. 1
Total part-time scientists & engineers	Line 2300, col. 1	Line 2300, col. 1
Total technicians employed in the sciences and engineering	Line 2800, col. 1	Line 2800, col. 1

CONFIDENTIALITY

The National Science Foundation recognizes that its ability to gather much of the enclosed information would be severely impaired if it could not be held in confidence. Please indicate below the number of any items which would not be supplied but for assurance that the source will be held in confidence. The Foundation will hold in confidence such information to the extent permitted by law.

Approval Expires December 1978

NATIONAL SCIENCE FOUNDATION
WASHINGTON, D.C. 20550

SURVEY OF SCIENTIFIC AND ENGINEERING PERSONNEL EMPLOYED AT UNIVERSITIES AND COLLEGES, JANUARY 1978

INSTRUCTIONS AND DEFINITIONS

The National Science Foundation requests your cooperation in completing the attached questionnaire covering the personnel characteristics of your institution as they relate to the sciences and engineering. This form requests employment data as of January 1978. The questionnaire should be completed and returned to NSF by March 31, 1978. If you determine, however, that you will not be able to respond by that date, please notify NSF and request an extension of time.

This survey is similar to that conducted by this office each year. The major difference this year is the deletion of the question (formerly item 5) on Ph.D./Sc.D.'s by field and employment status and the removal of the "optional" designation for the item requesting FTE data by field, (formerly item 7).

Where data reported in the current survey differ significantly from those reported in the previous survey, please indicate the reasons for the difference, such as "opening of new medical school," etc., at the end of the questionnaire in the "Remarks" section, or on a separate sheet of paper.

If you have any questions regarding information requested on this form, write or telephone Mr. Robert Loycano at the Universities and Nonprofit Institutions Studies Group, Division of Science Resources Studies, National Science Foundation, 1800 G Street, N.W., Room L-602, Washington, D.C. 20550 (Telephone: 202/634-4673). Additional forms, as well as copies of previous responses, may be obtained by writing to the above address.

Institutions of Higher Education

Academic institutions should include in the form for the parent institution data on professional and technical personnel employed in the sciences and engineering in all branches and other units of the parent institution. *Include* regional campuses, medical school, or an agricultural experiment station, but *exclude* an associated federally funded research and development center (FFRDC). FFRDC's are to report their data separately from the administering university.

Include all personnel who were paid a salary or stipend, including *postdoctorals*, and other staff, such as members of religious orders, who received no remuneration while employed at the institution.

Exclude: (1) Personnel on sabbatical or other leave status; (2) personnel employed in branches of your institution located in foreign countries; (3) unpaid voluntary staff; (4) student health service personnel; and (5) those agricultural extension personnel primarily involved in home economics and 4-H youth programs.

Medical Schools

Incorporate data for medical schools in the data for the parent institution. Medical schools are those 2- or 4-year schools of medicine approved by the Council on Medical Education and Hospitals and the Association of American Medical Colleges. *Include:* (1) Teaching and R&D functions of hospitals or clinics owned, operated, or controlled by universities and integrated operationally with the clinical programs of their medical schools; (2) research bureaus or institutes which are integral parts of medical schools; (3) research bureaus and institutes which are nonuniversity owned but are affiliated with the medical school and any university bureaus, and institutes which may be outside the departmental structure of universities, but whose senior research staff members hold teaching appointments with medical schools.

Personnel employed at such organizations that are to be reported in the survey include all M.D.'s, D.D.S.'s, etc., with *faculty* or *academic* appointments. Typical among these are physicians, dentists, public health specialists, pharmacists, etc., who spend the *greatest* proportion of their time in teaching, clinical investigation, or other R&D activities.

Exclude: (1) All medical practitioners, interns, residents, and clinical fellows *without* faculty or academic appointments; (2) scientists whose primary employment is at independent hospitals even though they may perform some teaching or research functions for your institution through cooperative agreements; (3) nurses; (4) some allied health professionals primarily involved in direct patient care, such as optometrists, nurse anesthetists, occupational therapists, and physical therapists; and, (5) unpaid voluntary staff at medical or dental schools.

Federally Funded Research and Development Centers (FFRDC's)

For purposes of this survey, FFRDC's are defined as R&D organizations exclusively or substantially financed by the Government and administered on a contractual basis by educational institutions or other organizations. The following is a current list of FFRDC's administered by universities and colleges:

Ames Laboratory
Applied Physics Laboratory (Johns Hopkins University)
Applied Research Laboratory
Argonne National Laboratory
Brookhaven National Laboratory
Center for Naval Analyses
Cerro Tololo Inter-American Observatory
E. O. Lawrence Berkeley Laboratory
E. O. Lawrence Livermore Laboratory
Fermi National Accelerator Laboratory
Jet Propulsion Laboratory
Kitt Peak National Observatory
Lincoln Laboratory
Los Alamos Scientific Laboratory
National Astronomy and Ionosphere Center
National Center for Atmospheric Research
National Radio Astronomy Observatory
Oak Ridge Associated Universities
Plasma Physics Laboratory
Space Radiation Effects Laboratory
Stanford Linear Accelerator Center

Data Elements Required to Complete This Survey

If the following seven characteristics are known for each science and engineering employee, the request can be substantially completed without estimates. The characteristics are further described elsewhere in the instructions.

1. Scope of personnel included:
   a. Scientists and engineers
   b. Science and engineering technicians
2. Assignment status:
   a. Full time
   b. Part time
3. Field of employment (22 detailed fields in 7 broad groupings)
4. Full-time-equivalents (FTE's)
5. Function:
   a. Teaching
   b. Research and development
   c. Other science and engineering activities
6. Highest earned degree
   a. Ph. D. or Sc. D.
   b. Ed. D.
   c. M. D., D.D.S., D.V.M., etc.
   d. Master's
   e. Bachelor's or its equivalent
7. Classification of scientists and engineers by sex.

Classification of Fields of Employment in the Sciences and Engineering

Listed below are the broad and detailed fields of employment corresponding to those shown on the questionnaire with illustrative disciplines in each field.

Please classify persons (including those employed in interdisciplinary or multidisciplinary specializations) in the listed fields with which their activities (teaching, research, or other) are *most closely identified*. In the case of a scientist employed in a general category such as science education, he should be reported in the field *most closely related* to the academic requirements of his position—such as mathematics, sociology, or psychology.

Because of the importance of academic departments in the organizational structure and, thus, in the information systems of institutions of higher education, many institutions must report individuals in terms of

the departmental assignment shown in their personnel information systems. In some instances, the designated department will not necessarily be the same as the field in which an individual is actually employed.

Because of the departmental structure, it is important that respondents include in the survey organizational units that are not part of any academic department. For example, scientists and engineers employed at a computer center that is not affiliated with a particular academic department should be *included* in the survey.

ENGINEERING

Aeronautical & Astronomical: aerodynamics, aerospace, space technology
Chemical: ceramic, petroleum, petroleum refining process
Civil: architectural, hydraulic, hydrologic, marine, sanitary and environmental, structural, transportation
Electrical: communication, electronic, power
Mechanical: engineering mechanics
Other Engineering: agricultural, industrial and management, metallurgical and materials, mining, nuclear, ocean engineering systems, textile, welding, interdisciplinary fields for the training of technicians

PHYSICAL SCIENCES

Chemistry: analytical, inorganic, organo-metallic, organic, pharmaceutical, physical, polymer science (exclude biochemistry)
Physics: acoustics, atomic and molecular, condensed matter, elementary particles, nuclear structure, optics, plasma
Other Physical Sciences: astronomy (laboratory astrophysics, optical astronomy, radio astronomy, theoretical astrophysics, X-ray, gamma-ray, neutrino astronomy), metallurgy, interdisciplinary fields for the training of technicians

ENVIRONMENTAL SCIENCES (TERRESTRIAL AND EXTRATERRESTRIAL)

Earth Sciences: engineering geophysics, general geology, geodesy and gravity, geomagnetism, hydrology, inorganic geochemistry, isotopic geochemistry, organic geochemistry, lab geophysics, paleomagnetism, paleontology, physical geography and cartography, seismology
Atmospheric Sciences: aeronomy, solar, weather modification, extraterrestrial atmospheres, meteorology
Oceanography: biological oceanography, chemical oceanography, geological oceanography, physical oceanography, marine geophysics

MATHEMATICAL AND COMPUTER SCIENCES

Mathematics: algebra, analysis, applied mathematics, foundations and logic, geometry, numerical analysis, statistics, topology

Computer Sciences: computer programming,[1] computer and information sciences (general); design, development, and application of computer capabilities to data storage and manipulation, information sciences and systems; systems analysis

LIFE SCIENCES

Agricultural Sciences: agronomy, animal science, dairy science, food science and technology, forestry, horticulture, poultry science
Biological Sciences: anatomy, bacteriology, biochemistry, biogeography, biophysics, ecology, embryology, entomology, evolutionary biology, genetics, immunology, microbiology, nutrition and metabolism, parasitology, pathology, pharmacology, physical anthropology, physiology, plant sciences, radiobiology, systematics, zoology, interdisciplinary fields for the training of technicians
Medical Sciences: Internal medicine, neurology, ophthalmology, preventive medicine and public health, psychiatry, radiology, surgery, veterinary medicine, dentistry, pharmacy, podiatry, anesthesiology, chemotherapy, dermatology, geriatrics, nuclear medicine, obstetrics, gynecology, oncology, pediatrics, physical medicine and rehabilitation, interdisciplinary fields for the training of technicians[2]

PSYCHOLOGY: animal behavior, clinical psychology, comparative psychology, counseling and guidance, development and personality; educational, personnel, vocational psychology and testing; experimental psychology; ethology; industrial and engineering psychology, social psychology

SOCIAL SCIENCES

Economics: agricultural economics; econometrics and economic statistics; history of economic thought; international economics; industrial, labor and agricultural economics; macroeconomics; microeconomics; public finance and fiscal policy; theory; economic systems and development
Sociology: comparative and historical, complex organizations, culture and social structure, demography, group interactions, social problems and social welfare, sociological theory
Political Science: area or regional studies, comparative government, history of political ideas, international relations and law, national, political and legal systems, political theory, public administration

Other Social Sciences: cultural anthropology, criminology, history of science, linguistics, socioeconomic geography, urban studies, research in education, and research in law, i.e., attempt to assess impact of legal systems and practices on society.

[1] Personnel employed as computer programmers should be reported as technicians (item 2).
[2] Exclude personnel primarily involved in direct patient care.

Section A—Number of Scientists and Engineers, January 1978

(Includes postdoctorals and excludes graduate students)

This section requests data on full- and part-time employed scientists and engineers. Scientists and engineers include *faculty members, postdoctorals, and other professionals* working in the sciences and engineering at your institution, including those in research administration. These professionals work at a level at which the knowledge acquired by academic training equal to a bachelor's degree is essential in the performance of duties. Graduate students are not considered scientists and engineers for survey purposes.

Two possible criteria used in determining whether an individual is employed full time are (1) his/her working 40 hours per week; or (2) his/her teaching 12 credit hours per week. (The preceding serve as illustrations only; the "full-time" workload may vary somewhat from institution to institution.)

Avoid double counting; if an individual is a full-time employee, but his assignment involves more than 1 department or more than 1 campus, he/she should be counted as 1 full-timer in his/her actual or primary field of employment and at his/her primary campus location.

Item 1. Full-time scientists and engineers, by field and function in which *primarily* employed, January 1978.

In items 1a to 1h, the functional classification of professional personnel into teaching (column 2), R&D (column 3), and other science and engineering activities (column 4), should be based on the function in which the person is *primarily* engaged or employed at the institution. For example, a person engaged in two or all three of the specified functional categories should be classified in the function in which he spends the *largest* proportion of his time. *Exclude* outside consulting work and teaching not performed under the auspices of your institution.

In classifying personnel by function, note that determinations made solely on the basis of job titles may produce a significant bias primarily toward teaching. It is important to recognize that persons with professorial rank may also be engaged in research.

In classifying an individual under a particular category (teaching, research and development, or other science and engineering activities), take into consideration all official activities even if carried on in a school or department other than the one in which he holds his principal appointment.

Teaching (column 2) is defined as encompassing those activities connected with degree-credit courses or which are intended to lead ultimately to the granting of degrees or certificates or to professional certification or licensing.

Include under "teaching" any academic administrator—such as the President, a Dean, or a department chairman—who holds a science or engineering degree, unless the individual is primarily involved in the administration of R&D activities. If the individual cannot be identified with *one* specific discipline, report the field of his highest earned degree. Administrators primarily involved in R&D activities should be reported in the "R&D" column.

Include personnel engaged in instruction of: first-year trainees, residents, and other professional personnel receiving advanced training such as postdoctoral fellows or trainees.

Time spent by faculty or other staff members in supervising the thesis work of graduate students is considered to be part of the teaching function.

Exclude instructors in nursing programs, dental hygiene, etc., specialties that relate primarily to direct patient care.

Research and development (column 3) includes basic and applied research in the sciences and engineering and design and development of prototypes and processes.

Research is a systematic, intensive study directed toward fuller knowledge of the subject studied. *Research* includes activities that are separately budgeted, including all activities specifically organized to produce research outcomes and commissioned by an agency either external to the institution or separately budgeted by an organizational unit within the institution. This activity includes all

departmental research that is separately budgeted. *Include* in this function the preparation for publication of books and papers describing the results of the specific research and development. Also *include* the *administration* of research and development.

Development is the systematic use of knowledge directed toward the design and production of useful prototypes, materials, devices, systems, methods, or processes. It does *not* include quality control or routine product testing.

Under *Other science and engineering activities* (column 4) report all professional personnel *not* primarily employed in teaching or research and development, as defined above. Examples of such activities are agricultural demonstration work not specifically excluded on page 1; adult education (if not for degree credit); dissemination of scientific information; and student counseling by individuals with degrees in psychology. *Exclude* hospital employees predominantly involved in patient services, Student Health Service professionals, and other individuals that are *not* primarily engaged in science or engineering activities. *Do not use* this category to report individuals for which there is difficulty in determining their primary function. It is preferable that you classify each person in the most appropriate functional category according to your best estimate.

Full-time-equivalent distribution, by function. In line 1i, apportion staff members across the three functions on the basis of the proportion of effort or time spent in each of the functions, thus correcting for the "primarily engaged" headcount data reported in line 1h. For example, an individual devoting three-fourths of his time to teaching and one-fourth to research and development should be counted as 0.75 in teaching and 0.25 in research and development. The FTE values should then be accumulated for each function. This sum should then be *rounded to the nearest whole number* before entering the total on the questionnaire. In line 1i, totals entered in columns 2, 3, and 4 should add to the total in column 1.

Item 2. Full-time scientists and engineers, by highest earned degree and function in which *primarily* employed, January 1978.

For the purposes of this survey, earned degrees are classified in five categories:

a. *"Ph.D. or Sc.D."* degrees (include all such earned degrees.) *Include* individuals holding both the Ph.D. (or Sc.D.) degree and any other doctorate degree.

b. *"Ed.D."* (includes all such earned degrees.)

c. *"M.D., D.D.S., D.V.M., etc." includes* individuals whose highest earned degrees are first-professional medical degrees that represent the completion of the academic requirements based on programs that require at least 2 academic years of previous college work for entrance and require a total of at least 6 academic years of college work for completion. Specifically include in line 2c first-professional degrees in Medicine (M.D.), Dentistry (D.D.S. or D.M.D.), Veterinary Medicine (D.V.M.), Chiropody or Podiatry (D.S.C. or D.P.), and Osteopathy (D.O.). Individuals holding both the Ph.D. (Sc.D.) degree *and* a first-professional degree such as the M.D., should be included in line 2a as mentioned in (a) above.

d. *"Master's" degrees* includes all degrees above the bachelor's and first-professional degree and other than the doctorate degrees reported between lines 2a and 2c.

e. *"Bachelor's or the equivalent"* degrees includes all individuals whose highest earned degree is the bachelor's degree or a 4- or 5-year first-professional degree, or who have the equivalent in experience, even if they have not earned such a degree (line 2e).

Item 3. Part-time scientists and engineers, by field and function in which *primarily* employed, January 1978.

Instructions for item 1 relating to classification by field and function also relate to part-time professional staff in item 3.

In estimating the full-time-equivalents of part-time personnel in line 3i, take into account both the overall workload and the proportion of time spent on each of the three functions of activity. For example, if full-time workload is 40 hours per week, and an individual is estimated to spend 10 hours on teaching and related duties and 6 hours on research, his FTE values would be teaching—.25 (10/40), R&D—.15 (6/40). The FTE values should be accumulated for each function and *rounded to the nearest whole number* before entering the total on the questionnaire. The FTE values entered in columns 2, 3, and 4 should then be summed to arrive at the total to be entered in column 1.

Item 4. Part-time scientists and engineers, by highest earned degree and function in which *primarily* employed, January 1978.

Instructions for item 2 relating to the classification by field and highest earned degree also relate to part-time professional staff in item 4.

Item 5. Full-time scientists and engineers, by field in which *primarily* employed and **sex**, January 1978.

Institutions are requested to report total full-time scientists and engineers, by sex and field in which primarily employed. Data in column 1 (total of men and women) should equal data shown in item 1, column 1.

Item 6. Scientists and engineers, by field in which *primarily* employed, employment status, and full-time-equivalents (FTE's), January 1978.

Data in columns 1, 2, and 3 are derived from data reported in column 1 of items 1 and 3. To estimate total full-time-equivalents (FTE's) in column 4, take into account both allocation of effort, by field, and proportion of full-time workload accounted for by part-time personnel. FTE's in column 5 should reflect research effort of both full- and part-time professional personnel.

The following example showing how data might be reported in columns 1 through 5 is included for illustrative purposes only. For the sake of this computation, it is assumed that the data are estimated on the basis of detailed records on faculty activity. The Foundation recognizes, however, that the information systems at many academic institutions do not, in fact, yield data at this level of detail. In such cases, or in instances where institutions would be required to expend an excessive effort to produce the information in the desired format, your best estimates on an alternative basis would be completely acceptable.

Example

If your institution employs:

20 full-time chemical engineers
10 part-time chemical engineers
30

4 full-time electrical engineers
4 part-time electrical engineers
8

And:
Of the 20 full-time chemical engineers, 6 have split appointments (50-50 basis) with the electrical engineering department; thus, 14 are employed solely as chemical engineers.

All part-time personnel carry, on the average, one-third the normal workload.

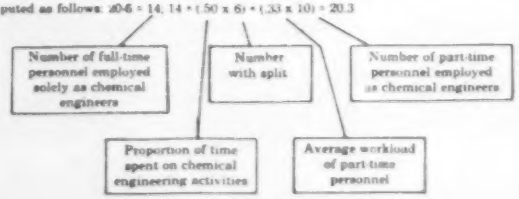
Concerning R&D effort, 12 of the 20 full-time chemical engineers and 2 of the 4 full-time engineers expend, on the average, one-fourth of their time on R&D activities.

Then, the data in lines 2712 (chemical engineers) and 2714 (electrical engineers) should be estimated as follows:

Item 6

Line	Total Headcount (Col. 1)	Full time (Col. 2)	Part time (Col. 3)	Total FTE's (Col. 4)	R&D FTE's (as percent of col. 4) (Col. 5)
2712 (chemical engineers)	30	20	10	[1]20	[2]15
2714 (electrical engineers)	8	4	4	[3]8	[4]6

[1] Computed as follows: 20-6 = 14; 14 + (.50 x 6) + (.33 x 10) = 20.3



Number of full-time personnel employed solely as chemical engineers
Number with split
Number of part-time personnel employed as chemical engineers
Proportion of time spent on chemical engineering activities
Average workload of part-time personnel

[2] Computed as follows: 4 + (.50 x 6) + (.33 x 4) = 6.33
[3] Computed as follows: .25 x 12 = 3; 3÷20 = .15 = 15%
[4] Computed as follows: .25 x 2 = .50; .50÷8 = .06 = 6%

Section B—Number of Technicians Employed in the Sciences and Engineering, January 1978

Item 7. Technicians, by field and function in which *primarily* employed, January 1978.

Technicians include all persons employed in positions which involve technical work at a level requiring knowledge in any of the fields of engineering, mathematics, physical sciences, environmental sciences, life sciences, psychology, or social sciences comparable to that acquired through formal post-high school training *(less than a bachelor's degree)*, such as that obtained at technical institutes and junior colleges or through equivalent on-the-job training or experience. All personnel performing the duties described above should be reported as technicians *even* if they hold a bachelor's or higher degree. Some typical job titles include laboratory technician or assistant, physical science aide, engineering aide, statistical aide, draftsman, and computer programmer.

Exclude graduate students; technicians involved primarily in patient care service in university affiliated hospitals; and craftsmen such as electricians, carpenters, machinists, etc. In the case where undergraduate students, juniors or seniors, are employed in R&D activities, they may, where applicable, be included as technicians.
